Experience

SEP 2023 - PRESENT Senior Software Engineer • **Marmind GmbH**

I joined Marmind to help them in the process of frontend modernization. Our aim was to migrate the AngularJS application to the latest Angular. (Ang 17 at that time) New standards introduced like the NX monorepo, usage of signals, new testing practises. Built our own design library wrapped around existing libraries and CDK.

MAY 2022 - SEP 2023 Expert Software Engineer • **Deutsche Telekom IT**

Originally joined the company to help other teams and colleagues with cloudification and modern engineering related topics. I was part of a team, where successfully started to introduce CI/CD processes into the ongoing project. I did regular sessions within the team to increase knowledge related to testing and understanding the cloud. I was also participated in the development of the application.

OCT 2020 - MAY 2022 Senior Software Engineer • **DMG MORI Digital Heitec**

The company manufactures control panels for various manufacturing processes. These panels run web applications via Electron. The aim of the project was to build a platform to host these applications but also deliver some base applications with it. I was involved in the implementation of the applications, reviewed pull requests and mentored junior colleagues. The challenge was that we have to support both cloud and on-premise availability of the platform.

DEC 2018 - AUG 2020 Software Engineer • **Accenture**

I worked for a company related to banking in the UK via Accenture. The project was about cloudification and modernization of the key applications. The exact application I worked on was a release manager tool. The Application connected to Azure DevOps via Azure APIs to control the pipelines and also sync the build states from there, in order to control the CI/CD processes.

MAY 2015 - NOV 2018 System Development Consultant • **Process Solutions**

My job consisted of creating web applications and SQL reports for the company. I was in charge of creating zen application which could generate invoices and reports. The team worked in SCRUM. The challenge was to generate printable invoices, which can be digitally scanned via the other applications within the company.

Skills

Programming Languages

Javascript, Typescript, HTML, CSS, Sass, C#, Java

Frameworks & Libraries

Angular, vue.js, Ionic, .NET, nest.js, typeORM, Tailwind, Angular Material, PrimeNG

Tools & Platforms

Git, GitHub, Vercel, Docker, Webpack, Vite, EF Core, Firebase, AWS, Azure, Figma, Jira

Education

GDE
Computer Science Bsc

AHS
Information Technologist

Languages

English (C1), German (B1), Hungarian

Free time

Travelling, Playing Music, Meet with friends, Playing games
